Test Plan - OpenCart Demo Store

1. Introduction

Manual functional testing of the OpenCart demo storefront (*https://demo.opencart.com/*).

2. Objectives

- Verify core customer flows: registration, login, search, product pages, cart, checkout.
- Find, log and report defects with evidence.

3. Scope

In scope: storefront functional, negative, boundary, basic UI/usability, cross-browser (Chrome, Firefox).

Out of scope: admin panel, real payments, performance/load, security penetration, API testing.

4. Requirements Under Test

ID	Requirement
REQ-01	User registration
REQ-02	Login, logout, password reset
REQ-03	Search, sort, pagination
REQ-04	Product pages, wishlist, compare
REQ-05	Shopping cart
REQ-06	Checkout

5. Test Approach

- Smoke test first, then functional cases (positive, negative, boundary value analysis, equivalence partitioning).
- Exploratory sessions (time-boxed, 60 min).
- Retest fixed bugs; regression on affected modules.
- Manual execution; results in `OpenCart_TestCases.xlsx`.

6. Test Environment

Item	Value
URL	https://demo.opencart.com/
Browsers	Chrome (latest), Brave (latest)
OS	Windows
Test data	Test-only email, fake address; no real personal data

7. Entry Criteria

- Demo site reachable; test cases reviewed; test accounts ready.

8. Exit Criteria

- 100% of planned cases executed.
- No open Critical/High defects (or documented and accepted).
- Summary report completed.

9. Suspension / Resumption

Suspend if the site is down or data is reset mid-run; resume when stable and rerun affected cases.

10. Deliverables

Test plan, test cases + RTM, bug log with screenshots, execution summary.

11. Defect Severity

Severity	Meaning
Critical	Blocks core flow (cannot checkout/login)
High	Major function wrong (e.g. wrong total)
Medium	Feature works with workaround
Low	Cosmetic/text

12. Risks and Assumptions

- Shared public demo: other users and periodic resets may change data and results.
- No formal specification: expected results are based on standard e-commerce behaviour; verify against the demo before marking Fail.
- Payment completion is not tested.

13. Schedule

Task	Days
Exploration and requirements	1
Execution round 1	2-3
Bug reporting/retest	1-2
Summary and GitHub upload	1
